

## Social Responsibility Q&A's

**1. Do your complete foods comply with the complete food nutrient tolerances as recommended by FEDIAF and/or AAFCO?**

All of our ORIJEN and ACANA diets do follow the nutritional guidelines for dogs and cats as established by AAFCO, as well as FEDIAF

**2. How regularly are the products tested to ensure this is maintained?**

We test every lot number of food for: protein, ash, fat, fibre, moisture, calcium and phosphorus. Each diet has a complete nutritional analysis conducted by an independent research laboratory to ensure all nutritional requirements are met

**3. Are any of your products guaranteed free from artificial preservatives and antioxidants including any added by ingredient suppliers? If yes, which products?**

All ORIJEN and ACANA ingredients and foods are free from Ethoxyquin, BHA, BHT or any other chemical preservative. We do work closely with our suppliers to ensure that only a natural preservative, mixed tocopherols, is used on our ingredients. Mixed tocopherols is a blend of vitamin E and rosemary extract

**4. Which form of selenium supplement do you use in your products?**

We don't supplement selenium in any of our diets. Vitamins and minerals in ORIJEN and ACANA come primarily from the ingredients themselves, rather than synthetic supplementation. All of diets do contain enough selenium coming naturally from the ingredients themselves so we do not need to supplement.
