

Oil Quality – Tribal TLC Dog Food Salmon Recipe

To whom it may concern,

The Tribal TLC Adult Salmon recipe has the highest fat content within the TLC dog food range primarily as a result of the high levels of fresh salmon used in this recipe. Fresh salmon which is high in natural fatty acids provides the majority of the fat content within the recipe, so less external oils are required.

Furthermore, the low processing temperatures of our unique process, which we guarantee across our supply chain, ensures that the fats are not subjected to high temperatures which can cause oxidative degradation, reducing the nutritional quality.

A handwritten signature in black ink, appearing to read 'FM', with a long horizontal stroke extending to the right.
